Notes

Note 1 – Basis of presentation

Introduction

The Group of companies' accounts for the second quarter 2018 comprise Bonheur ASA and its subsidiaries (together referred to as the "Group of companies" and individually as "Group entities") and the shares in associates. The quarterly accounts of 2018 and the Group accounts for 2017 may be obtained by contacting Fred. Olsen & Co., Oslo, or at www.bonheur.no.

Financial framework and accounting principles

The interim accounts have been prepared in accordance with IAS 34 as adopted by EU and the additional requirements in the Norwegian Securities and Trading Act. The accounts do not include all information required for annual accounts and should be read in conjunction with the Group of companies' annual accounts for 2017 and the previous interim reports issued in 2018. The interim financial report for the second quarter 2018 was approved by the Company's board on 12 July 2018.

The Group of companies has adopted IFRS 9 Financial instruments and IFRS 15 Revenue from Contracts with Customers in 2018. The standards will not have significant impact on the Group of companies' financial statements per 1 January 2018. The new accounting policies and standards are described in note 28 – Standards issued but not yet effective, in the consolidated financial statements in the Group of companies' Annual Report for 2017. The other main accounting policies applied by the Group of companies in these consolidated financial statements are the same as those applied by the Group of companies in its consolidated financial statements for the year ended 31 December 2017.

IFRS 16 – Leases

The Group of companies plans to apply the standard initially from 1 January 2019, using the modified retrospective approach. The cumulative effect of adopting IFRS 16 will be recognized as an adjustment to the opening balance of retained earnings at 1 January 2019, with no restatement of comparative information.

IFRS 16 introduces a balance sheet lease accounting where a lessee will recognize a right of use asset and a corresponding lease liability. The Group of companies has evaluated the existing leasing contracts, and estimated the effect of the new standard in the range of NOK 340 million to NOK 430 million. This will be recorded as an increased right of use assets and a correspondingly increased leasing liability.

Estimates

The preparation of interim accounts involves the use of appraisals, estimates and assumptions influencing the amounts stated for assets and obligations, revenues and costs. Actual results may differ from these estimates.

As to the offshore drilling segment, there are estimates and assumptions that have a significant risk of causing a material adjustment to the carrying amounts. Estimating the fair value of the assets in the Offshore drilling segment is a complex process involving a number of key judgements and estimates regarding various inputs. Due to the nature of the assets, the valuation technique includes a discounted cash flow model that uses a number of inputs from internal sources due to lack of relevant and reliable observable independent and external inputs. As a result of the current market situation and because there is more than normal uncertainty concerning when new contracts will materialize and equally in relation to future dayrate levels, the calculation of fair value of the assets in the offshore drilling segment is exposed to high estimation uncertainty.
